BIBLIOGRAPHY ON BIOSENSORS
A SAMPLING OF THE WORLD LITERATURE, 1960-1966

VOL. V

Preface

This bibliography was compiled during a program for assembly, evaluation, analysis, and application of biosensing devices. This work was performed under Contract NASw-1515, with the National Aeronautics and Space Administration. Technical aspects of this program are covered in PART I of this report, Summary Report on a Review of Biological Mechanisms for Application to Instrument Design, Vol. V. This bibliography represents the results of a literature search with particular emphasis on biosensor phenomenology. The material is a sampling of the world literature, generally covering the period 1960-1966 with some early 1967 references. It is a supplement to and extension of Document No. ARA-1026, which covers the period from 1900-1961 and is arranged by author, Document No. ARA-T-9211-5, Vol. II, which covers the period from 1900-1963 and is divided according to the major classes or receptors, Document No. ARA-211-F-4, Vol. III, which covers the period from 1960-1964, and Document No. ARA-345-F-4, Vol. IV, 1960-1965.

The bibliographic material has been placed in an IBM card code system which was developed for ease in literature handling and in retrieving assembled data for repeated and specific reference during subsequent phases of the program. Another advantage of this system is that it enables us to automatically print a bibliography in a number of different content determined formats. For example, we can divide and print the material in categories corresponding to the various sensed parameters (e.g., chemoreception, mechanoreception, etc.), or even divide further into sub categories such as olfaction, taste, etc. We could also divide the material according to the breakdown of animal phyla depending on the focus of interest of a particular user. The format used here was chosen for ready access and general reference. The cards from which this document was printed can be made available by special arrangement.

Acknowledgements

For her help in the preparation of this bibliography, the assistance of Elissa Papirno is most gratefully acknowledged. The cooperation, in granting access and permitting the use of photographic recording, of the following libraries is gratefully acknowledged: the Boston University Chenery Library; the Boston University of Medicine Library; the Harvard Biology Library; the Harvard Museum of Comparative Zoology Library; the Harvard Medical School Libraries; the M. I. T. Libraries; the Marine Biological Laboratory Library, Woods Hole; and several other libraries.

TABLE OF CONTENTS

	<u>Page</u>
Preface	ii
User's Guide	v
SECTION 1 MECHANORECEPTORS	1
- sound, vibration, acceleration pressure, equilibrium deformation, touch reception and proprioception.	
SECTION 2 PHOTORECEPTORS	65
- and some related material	
SECTION 3 CHEMORECEPTORS	132
- gustatory and olfactory receptors, hygro- receptors and internal chemoreceptors.	
SECTION 4 THERMORECEPTORS	175
- warm and cold receptors, infrared sensors, and temperature regulatory information.	
SECTION 5 ELECTRIC AND MAGNETIC FIELD SENSORS	181
SECTION 6 GENERAL SENSOR INFORMATION	193
- sensor characteristics in general. Also papers dealing with sensors representing combinations of the preceding sections.	
SECTION 7 NEURAL ASPECT OF SENSOR FUNCTION	211
- neural phenomena, signal generation and propagation, non specific cutaneous inner- vation, some material on central nervous system reception and processing of sensory signals, pain reception, etc.	
SECTION 8 MISCELLANEOUS	243
- bionics, migration and orientation, mechanical and electronic analogues, techniques and instru- mentation, general physiology.	
SECTION 9 JOURNAL CODE TRANSLATIONS	269

User's Guide

This bibliography appears in nine sections corresponding generally to the various sensed parameters. Each section is arranged alphabetically by author. The last section is a translation of the journal code. The reference material includes articles published in a number of scientific journals, both foreign and domestic, government and other reports, books and sections of books.

The format is similar for each type of reference. In the case of journal articles, the first line includes the senior author's name and the journal information. The journal title appears as a four letter code. It is followed by a series of digits. The first three digits, followed by a comma, constitute the volume number. The four digits after the comma are the page number. The page number is followed by the last two digits of the year with no intermediate separation or punctuation. The second line of the reference contains co- or junior author's names, if any, followed by the article title.

For books, the first line of each reference retains the form previously described with only minor variations. The word BOOK appears in the position allocated to the four letter journal code and zeros fill the field where volume and page are found in the article references. The year is given by the last two digits of the digit series. The second line contains co- or junior authors, if any. These are followed by the publisher and title.

Reports follow roughly the same format as books. The code REPT replaces BOOK and an ASTIA Document number if one is assigned may also appear on the first line of the reference.

Sections of books are identified by the code SECT and a page number may appear in the digit string as well as the year.

The final section (Section 9) contains the journal code translations. The four letter code is followed by its translation to the journal title which is in a standard abbreviated form. The abbreviations are derived from those used in the Index Medicus, Chemical Abstracts, Physics Abstracts, etc.
